## 1. Introduction

AVS are either **single (1001HF)** or **triaxial (1003LF)** miniature industrial systems for vibration and temperature monitoring with built-in signal processing, all enclosed in a sensor-sized housing.

AVS modules allow for the reading of parameter values such as **Peak-to-Peak, RMS acceleration, RMS velocity**, as well as **temperature** directly from the module using any device that supports the **Modbus RS-485** communication protocol.

## 2. Applications

The modules detect, among others:

- » **[Shafts]** unbalance, misalignment, looseness (loose connections), coupling damage.
- » **[Drives]** rotor unbalance, mechanical looseness, mounting issues.
- » **[Fans]** blade unbalance, uneven blade loading, shaft misalignment or looseness.
- » **[Gearboxes]** tooth wear or damage, raceway wear, backlash.

## 3. Electrical connection

## 4. Calculated parameters

The modules continuously measure the vibration acceleration signal. The most important diagnostic parameters are determined from the signal:

## AVS 1001HF

PARAMETER	DESIGNATION	DESCRIPTION
peak acceleration value	acc Peak	early detection of failures
RMS acceleration value	acc RMS	general level of technical condition
RMS velocity value	vel RMS	general level of technical condition
peak envelope value	env Peak	early detection of failures, especially of rolling bearings and gears
RMS envelope value	env RMS	early detection of failures, especially of rolling bearings and gears
temperature	Temp	complement information about the dynamic state

## AVS 1003LF

PARAMETER	DESIGNATION	DESCRIPTION
peak acceleration value	X accPeak, Y accPeak, Z accPeak	early detection of failures
RMS acceleration value	X accRMS, Y accRMS, Z accRMS	general level of technical condition
RMS velocity value	X velRMS, Y velRMS, Z velRMS	general level of technical condition
temperature	Temp	complement information about the dynamic state

The parameters can be read via the RS-485 connector in the popular industrial MODBUS protocol (slave RTU, 115 kbps).

The modules can also read the original **raw vibration signal**. A dedicated communication protocol is used for this purpose. Raw data is read at a speed of 1.5 Mbps, which allows data acquisition in real time.

## 5. Dimensions

---

ELECTRICAL CONNECTOR  
M12 [0,47] - 5 PIN

## 6. Technical data

	AVS 1001HF	AVS 1003LF
<b>MEASUREMENT RANGE</b>		
Number of measurement axes	1: Z	3: Z,Y,X
Measurement range [g]	± 50, peak	± 40
Frequency range [Hz]	1 Hz do 11 kHz	1 Hz do 1 kHz
<b>ELECTRICAL DATA</b>		
Operating voltage [V]	24 V DC	
Current consumption [mA]	13	
Reverse polarity protection	Yes	
Type of sensor	Microelectromechanical system (MEMS)	
<b>OUTPUTS</b>		
Interface	RS485 115 kbps (calculated parameters) RS485 1.5 Mbps (raw signal)	
Calculated parameters	acc Peak, acc RMS, vel RMS (ISO), env Peak, env RMS, Temp	X accPeak, Y accPeak, Z accPeak, X accRMS, Y accRMS, Z accRMS, X vel RMS (ISO), Y vel RMS (ISO), Z vel RMS (ISO), Temp
Raw vibration signal	Yes	
Maximum number of connected units	100 - ADI protocol	
<b>ACCURACY</b>		
Linearity deviation	± 0,1%	± 0,1 % FSR
Temperature dependence	± 5% (-40 °C ... +85 °C)	
Transverse sensitivity	± 1%	1,5%
Sensitivity	40 mV/g	100 mV/g
Noise density	25 µg / √Hz	80 µg / √Hz

<b>OPERATING CONDITIONS</b>	
Ambient temperature [°C]	-40 °C ... +85 °C
Protection class	IP67
<b>TESTS / APPROVALS</b>	
EMC	EN IEC 61326-1:2021
Shock resistance	DIN EN 60068-2-27 100 g 11 ms
Vibration resistance	DIN EN 60068-2-6 20 g / 10 ... 3000 Hz
Maximum shock resistance [g]	10 000, peak 5 000, peak
Electrical isolation (case)	1 MΩ
RoHS	Yes
CE	Yes
<b>MECHANICAL DATA</b>	
Dimensions [mm]	Φ 22 x 50,3
Weight [g]	72
Type of mounting	M6 x 7 threaded hole in sensor
Material	Housing: stainless steel
Tightening torque [Nm]	7
Connector (or integrated cable)	5 pin M12 (shielded 2 x 2 x 0.14 mm <sup>2</sup> )
<b>ACCESSORIES</b>	
Components	Set screw: M6 to M6
<b>ELECTRICAL CONNECTION - PLUG</b>	
	<ul style="list-style-type: none"> <li>» AVS 1003LF - Top exit connector: M12 5-pin; maximum cable length: 300 m</li> <li>» AVS 1003LFC - DATAPUR-C 2x2x0,14 QMM; default cable length: 5 m</li> </ul>

## 7. Software update

---

1. Connect the sensor to the computer using the AVS LINK adapter.  
**AVS LINK should only be connected to USB-A ports, as it is not compatible with USB-C ports.**

---

*Computer -> USB/USB C cable -> AVS Link adapter -> AVS Module*

2. Next, launch the AV SENSOR MANAGER program, find the appropriate communication port on the left side, and click on it with the left mouse button. In the example, it is COM8.

---

*View from point 2*

- Refresh the list of devices by clicking the button on the left side of the "List of Devices" tab, then select the appropriate module.

*View from point 3*

- Load the appropriate configuration using the "Load software" button. It is a .amcSft file. Depending on the module type (HF or LF), you need to select the corresponding configuration.

*View from point 4*

View of the loaded version

5. After loading the appropriate configuration, click the "Update Device" button.

View from point 5

## 8th Configuration in AVSM, reading vibration data, raw signal and data export

---

1. Connect the module to your computer using the AVS LINK adapter.

---

*Computer -> USB/USB C cable -> AVS Link adapter -> AVS Modules*

2. Launch AV SENSOR MANAGER.
3. Locate the appropriate communication port on the left and left-click it. In this example, it's COM6.

---

*View from point 3*

- Then refresh the device list by clicking the button on the left side of the "List of Devices" tab and select the appropriate module.

View from point 4

- At the top, select the communication protocol. After changing it, confirm it by clicking "Change Protocol Now". In the "New Device Name" tab, enter the appropriate device name, and in the "New ID" tab, enter the appropriate ID by which the device will be searched. Below this are the "Baud Rates" for the specific protocol type. The AV SENSOR PROTOCOL defaults to 1,500,000 [Bd]. Modbus 9600 [Bd].

Default Communication Protocol

Modbus RTU ▼

Change Protocol Now

<b>Device Type</b>	AVS 1001HF
<b>Device Name</b>	HF_1
<b>UID</b>	47:00:23:00:0D:51:32:30:34:34:35:30 <span style="float: right;">📄</span>
<b>ID/Modbus ID</b>	1

Modbus RTU Baud Rate

9600 [Bd] ▼

Update Device

View from point 5

- Then in the "Measurements" "Modbus RTU" tab you can check the module readings by selecting "Reading data from device".

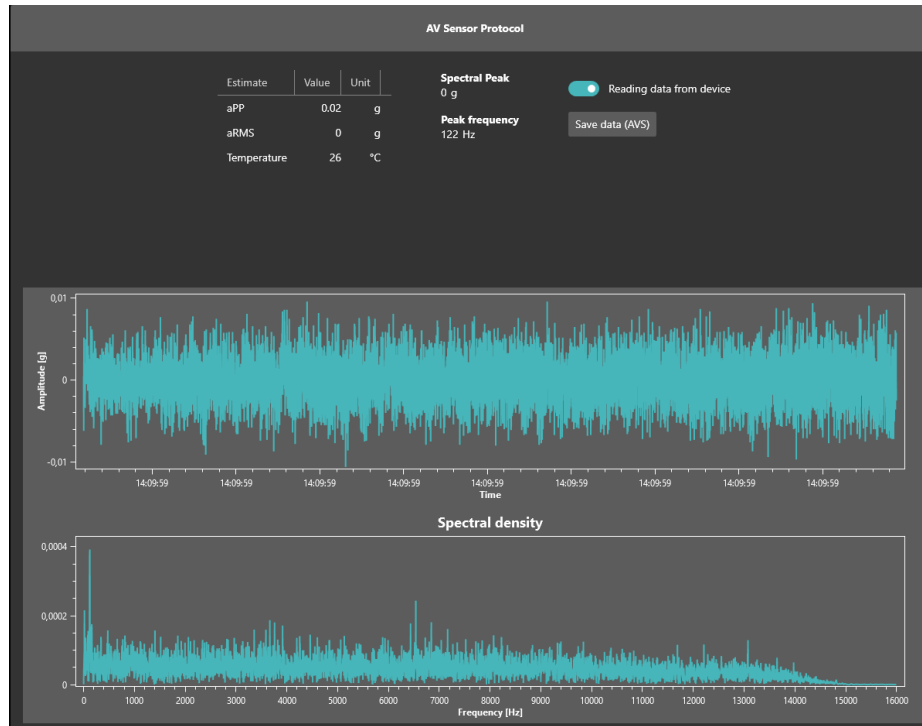

View from point 6

- To save data, select "Save data (Modbus RTU)".

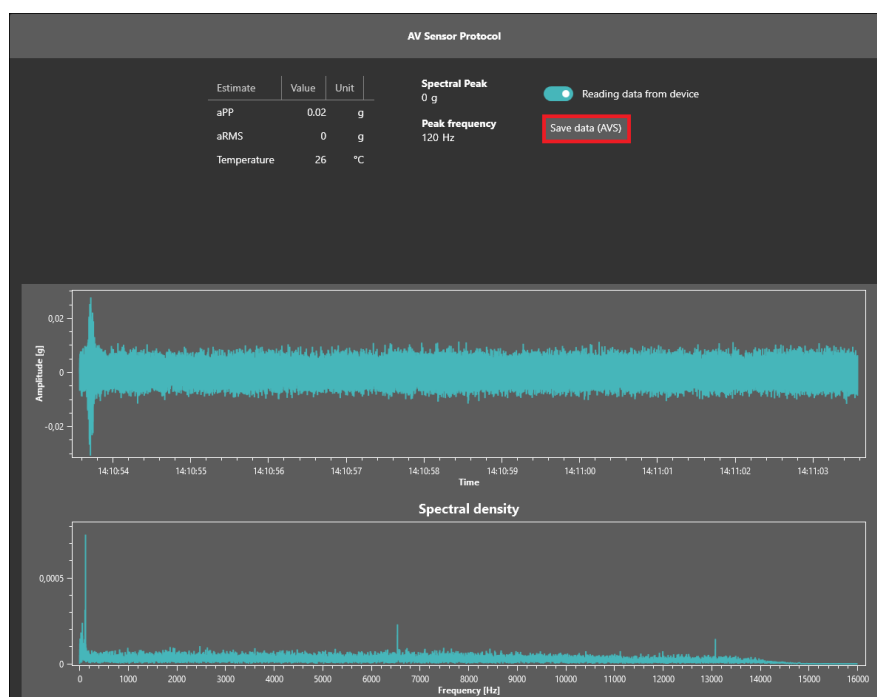

View from point 7

- To read the raw signal, uncheck "Reading data from device" from point 6, and then in the "Measurements" "AV SENSOR PROTOCOL" tab, select "Start reading".

View from point 8

- To save data, select "Save data (AVS)".

View from point 9

## 9th Connection to the PLC/SCADA controller

In this configuration, a PLC or industrial computer with an RS-485 interface and MODBUS protocol can be used for reading. Data is read at 115 kbps. A single RS-485 port can be used to connect multiple AVS modules to a bus, significantly reducing cabling costs.

Modules can be connected in series (termination must be used) or in parallel.

Below are the Modbus register maps that should be used to read the data issued by the module.

**Register numbers for the AVS 1003LF module:**

Name	Unit	Typ	Accuracy	Function	Address (dec)	Offset (hex)	Offset (dec)	Length (hex)	Length (dec)
<b>Sensor ID</b>	[char]	uint16	-	Read	1	0x00	0	0x01	2
<b>MAC</b>	[char]	uint8 [12]	-	Read	2-7	0x02	2	0x0C	12
<b>Speed</b>	-	uint8	-	Read/Write	8	0x0E	14	0x02	2
<b>Name</b>	[char]	char [12]	-	Read/Write	9-14	0x10	16	0x0C	12
<b>X Calibration A</b>	-	float 32	As float	Read/Write	15-16	0x1C	28	0x04	4
<b>X Calibration B</b>	-	float 32	As float	Read/Write	17-18	0x20	32	0x04	4
<b>X Calibration Sensitivity</b>	-	float 32	As float	Read/Write	19-20	0x24	36	0x04	4
<b>Y Calibration A</b>	-	float 32	As float	Read/Write	21-22	0x28	40	0x04	4
